

## NJ - AmeriHealth

### **Radiology Transparency Program**

**Effective Date: June 1, 2012**

AmeriHealth New Jersey, in partnership with AIM Specialty Health (AIM), will be reporting information about the imaging capabilities of all AmeriHealth-contracted providers who perform the technical component of advanced diagnostic imaging services, including CT/CTA, MRI/MRA, nuclear cardiology and PET Scans for AmeriHealth New Jersey members.

When ordering physicians request precertification online, a table will be presented that will include scores and cost information for local imaging providers. This table will only be viewable to ordering physicians after they have reached the provider section portion of the precertification process. Once a precertification request has been received, AIM specialists will proactively contact members to inform them of the imaging facility options available to them. Members can then make their decision of where to receive their services based on cost and the quality of services.
